Eva-tech™

Eva-tech  TM

Eco-friendly durability

More durable and eco-friendly alternative to timber.

Eva-Last®'s range of composite building solutions offer you premium outdoor living through innovative, durable and eco-friendly products.

Eva-Last® manufactures and supplies bamboo-plastic composite decking, cladding, railing, screens, fencing, pergolas as well as various accessories and systems to match. Whether you're converting a dull patio area into a dreamy deck, transforming a lifeless wall into a masterful design feature or need expert installation advice on your next home improvement project, Eva-Last® has over a decade of experience and is one of Africa's most tried and trusted composite building partners.

Stain resistant

Slip resistant

Environmentally friendly

A tested and proven formula

Eva-tech™ is a mono-extruded composite product that is made from recycled materials and are free from toxic chemicals & preservatives. The full Eva-tech™ range is UV & moisture resistant which means it will not rot, warp or crack when exposed to the elements. Eva-tech™ is ultra low-maintenance, needing absolutely no costly time consuming sanding, sealing or treating, giving you more time to sit back and enjoy.

A variety of stylish applications

Eva-tech™, the original decking line offered by Eva-Last®, continues to be a crowd favourite. As the most affordable range of composite decking products by Eva-Last®, it allows your imagination to grow with home improvement possibilities. Eva-tech™ is made of a unique combination of high density bamboo fibre and recycled polymer plastic. The range is extremely versatile with an offering of decking, cladding, railing, screening and even fencing profiles.

Surface finish:
Eva-tech™ wide slip resistant surface finish

Leading slip resistance

Eva-tech™ surface finishes can proudly boast the best slip resistance in their class to help prevent life's little mishaps.

Material:

High density bamboo and polymer composite

EVA-LAST® ENVIRONMENTAL PHILOSOPHY

Our philosophy in a nutshell

When you choose Eva-Last®, you are making a truly thoughtful choice for you and the environment. Eva-Last® offers a durable, low-maintenance bamboo composite that consistently outperforms timber and other composites.

Industry & environmental recognition

Eva-Last® has always been at the forefront of the green building industry and, since our inception in 2007, we have been continually and consistently improving our commitments to serving the environment and our clients.

We love trees

No trees are cut down for the purpose of creating Eva-Last® products. Eva-Last® uses only repurposed bamboo, paired with high-quality polymers.

Recycling at its best

Eva-Last® is an industry leader in utilising recycled plastics, which would otherwise end up in landfills and oceans. We transform this potential waste into striking and durable decking, railing and fascade products.

Out with the bad, in with the good

Eva-Last® products are free of toxic chemicals and preservatives normally used for the treatment of natural timber products.

Waste not, want never

In our factory, only the coffee grounds are tossed away. Every bit of quality, left over product is put back into the manufacturing line to be recycled and made into beautiful, useful decking surfaces.

Getting it there with “green” in mind

We go the distance to ensure our transportation channels have the lowest carbon emissions and smallest environmental footprint possible.

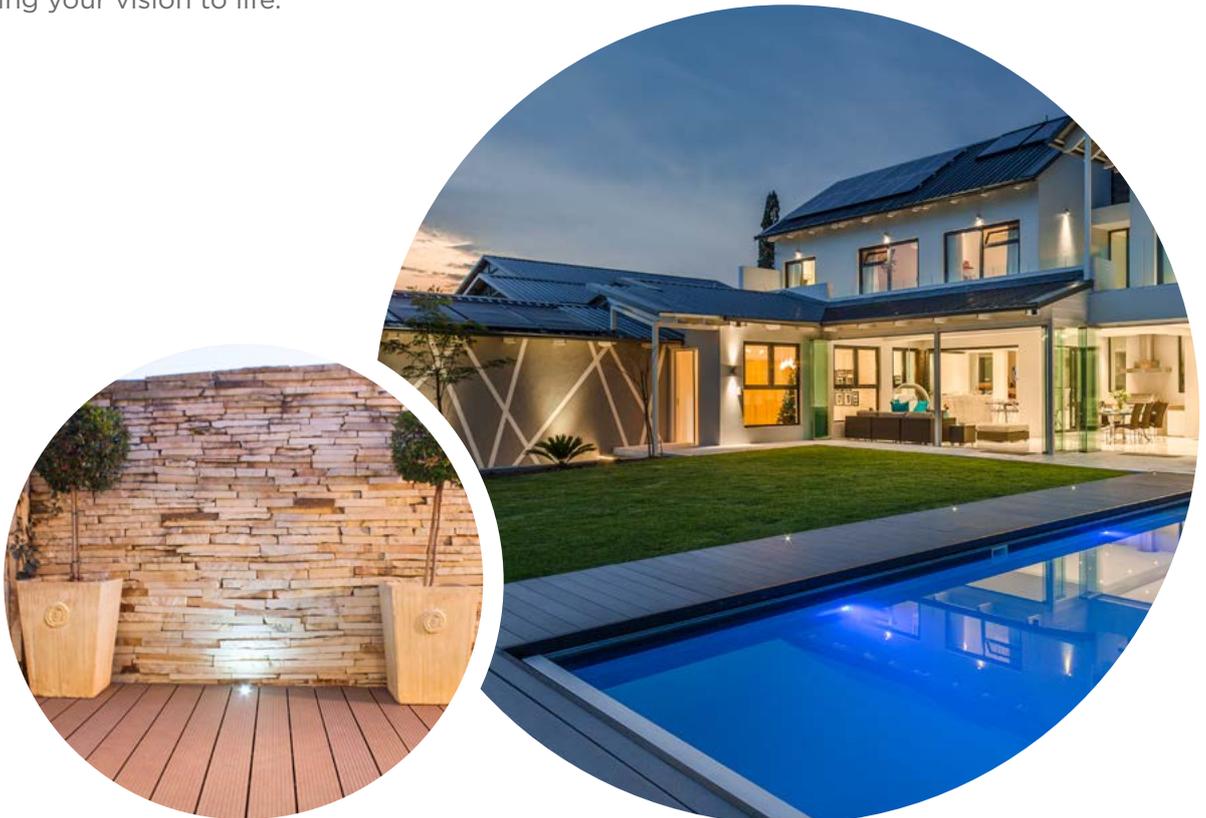

MADE WITH SOLAR ENERGY

Highly versatile. Ultra-low maintenance.

The Eva-tech™ range is highly versatile in its uses and applications. Available profiles include grooved and square edge decking boards, fascias, trims and utility profiles.

Eva-tech™ performs in all residential, commercial and high traffic industrial applications. From safari lodges to ocean marinas, boardwalks, promenades, restaurants, shopping centres or tranquil residential settings. Whatever the vision, Eva-tech™ offers a suitable profile that will help to bring your vision to life.

EVA-TECH™ COLOUR GUIDE DECKING | CLADDING | SCREENING | FENCING

Eva-tech™ composite adds a touch of class to your home with its classic and handsome single tone colours.

For printing and display reasons, the board images herein may vary slightly from the actual board colours. Physical samples should be viewed to determine actual colour before placing any orders.

HULK FASTENERS.

FASTENED, FOR LIFE.

Corrosion resistant

Neat surface finish

Easy torque control

Eva-Last® specialised systems: Fixing

Eva-Last® has developed a range of durable fasteners, specifically designed to work with the Eva-Last® co-extruded products, to provide the strongest fix. HULK is a range of fasteners that can be used to fasten all Eva-Last® decking and products onto a range of materials such as steel, timber, aluminium and composite sub-structures.

HULK FASTENERS

If you are looking for a fastener that will thoroughly complement your composite deck and ensure the ultimate stability and longevity, look no further than HULK fasteners™. HULK fasteners™ are specially designed to securely fasten the deck boards to a substructure, but can also be used in other wood or steel fixing applications. The coating employed for our HULK fasteners ensures the fixing system supports your deck through out its lifespan.

Eva-Last® specialised systems: HULK fasteners

Eva-Last® has developed a range of complete and durable specialised systems that work together with Eva-Last® composite products to ensure the stability and longevity of your deck. Eva-Last® exclusively recommends HULK screws to provide the strongest and most durable fix for both wood and steel. HULK screws are specially coated and designed to fasten clips to a substructure, but can also be used in many other wood and steel fixing applications too.

Composite Deck Screw (CDS)

Used for fastening 20 - 25 mm thick deck boards onto timber frames without having to pre-drill unless specified by decking manufacturer. Suitable for softwood and most hardwoods frames. Pre-drilling may be required for dense hardwood frames.

Material
SS 305

Screw dimensions
5.0x63MM

HEAD - PAN OR WASHER HEAD

To resist screw pullout or sinking too deep into soft materials.

REVERSE THREAD - ROLLET *(or a wing may be used instead - see metal)*

Removes excess material in cases of top fixing and enlarges the hole within the composite board, making space for expansion and contraction.

SHANK - STANDARD

The shank has no thread. This stops the composite from causing unwanted rotation in the screw, and in cases of clip screws, leaves additional space for the clip, which may allow for the gap between the boards to be reduced.

THREAD - V-THREAD FOR TIMBER

Large threads are able to cut through materials easily and resist pullout.

TIP - TORPEDO OR TYPE 17

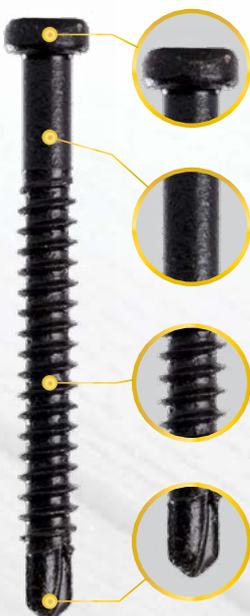

Pre-drilling tips allow for the use of the screw without pre-drilling*. Torpedo is a HULK-specific tip that makes for quicker, more controlled installation.

Metal Clip Screw

Used for fastening HULK hidden fasteners onto metal frames. HULK Fasteners are tested for use with 0.8 - 2.0 mm gauge steel, but have successfully been used in up to 2.5 mm steel. Though pre-drilling would be recommended for anything over 2.0 mm. The Clip Screw for metal frames is manufactured from hardened 410 Stainless Steel.

Material
SS 410

Screw dimensions
4.2x40MM

HEAD - Pan or Washer head

To resist screw pullout, or sinking too deeply into soft materials.

SHANK - Standard

The shank has no thread on it, stopping the composite from causing unwanted rotation in the screw, and in cases of clip screws, leaves additional space for the clip, which may allow for the gap between the boards to be reduced.

THREAD - Asymmetric thread

Smaller sharper thread allows for smoother installation by cutting through material easily. The number of threads per inch, allow for a better grip of steel structures.

TIP - Z-point

Z-point spade shape allows for easier cutting into metal.

HULK multi-purpose fasteners are the best choice for any outdoor, corrosion-risk, or long term application. HULK fasteners™ use an advanced bit lock system which maximises torque transfer, assembly speed as well as the life of bits and screws. HULK fasteners™ are the best choice for deck construction.

Key features of HULK composite deck screws:

1. The pan head works perfectly with HULK clips.
2. The flat bottom shape of the screw is designed to rest securely on top of a HULK clip, preventing movement and damage.
3. The thread and shaft work seamlessly with the substructure and HULK deck clip.
4. The tip of the clip screw and composite deck screw are the same, making them highly versatile.
5. Both HULK clips and composite deck screws are dark in colour, camouflaging them between deck boards.

HULK Halo decking clips

HULK decking clips offer a fast and simple installation solution. They are designed for use with HULK clip screws to provide a hidden fastening system that gives a clean, neat finish to your deck installation.

MADE WITH SOLAR ENERGY

Pollution free, no greenhouse gases emitted.

CHOOSE SUSTAINABLE DECKING

RENEWABLE RESOURCES & RENEWABLE ENERGY.

We believe that how we manufacture is just as important as what we manufacture when it comes to going green. That's why we've traded in fossil fuels for renewable energy. Our products are now **manufactured using solar power**. We are fully committed to bringing you a product that's holistically eco-conscious.

Each Eva-Last® range pairs recycled raw ingredients with bamboo for a stronger, more sustainable composite. Bamboo rejuvenates over 30 times faster than traditional hardwoods and it releases 35% more oxygen into our air. Eva-Last® is internationally recognised for our commitment to the environment. We're proud of the work we do to promote environmental sustainability, and invite you to choose timber alternatives that are gentle on the Earth.

- *Made from recycled materials*
- *Made using 100% solar energy*
- *No trees felled*
- *Reduced impact on landfills (Recyclable)*
- *No further treatment or toxic chemicals required*
- *Reduced carbon footprint*

Forest Stewardship Council (FSC) certification ensures that products come from responsibly managed forests that provide environmental, social and economic benefits. The diverse fauna and flora who share our forests are given the time and space to recover from our use of their environments.
